Angles & 2D Shapes

Year 4 · **Mark Scheme**

Lesson Worksheet — Answers

Easy / Standard

1. Acute

2. Obtuse

3. B — 90°

4. Right angle

5. 3

6. 4

7. B — square

8. 5

9. A, C and E (45°, 20° and 75° are all less than 90°)

10. 6

11. Straight angle (straight line)

12. B — triangle

13. 4

14. Obtuse

15. 4

Standard

16. Equilateral

17. B — isosceles

18. Scalene

19. 2

20. 180°

21. A — it has one angle of exactly 90°

22. 360°

23. A, B and E (a square, rectangle and rhombus all have 4 sides)

24. 3

25. 180°

26. A — circle

27. 60°

28. 8

29. A — a square with slanted sides (equal sides but not necessarily right angles)

30. 4

Standard / Hard

31. 180 − 55 = 125°

32. 360 − 100 − 130 = 130°

33. B — 180 − 40 − 80 = 60°

34. 55° (vertically opposite angles are always equal)

35. 180 − 65 − 65 = 50°

36. B — 360 − 90 − 90 − 100 = 80°

37. A, C and E (a square is a type of rectangle, a rhombus has 4 equal sides, and a square has 4 lines of symmetry)

38. 90 − 35 = 55°

39. 90° each (180 ÷ 2)

40. D — an isosceles triangle that is not equilateral has exactly one line of symmetry

41. 45° each (180 − 90 = 90, shared equally between the two angles)

42. A, C and E (each set sums to 180° and has one angle over 90°; B and D have no angle over 90°)

43. 360 − 110 − 90 − 70 = 90°

44. 540 − (4×100) = 140°

45. No, they are not equal; 70 + 110 = 180°

Homework Worksheet — Answers

Easy / Standard

1. Acute

2. Obtuse

3. B — 90°

4. Straight angle

5. 6

6. 5

7. B — rectangle

8. 8

9. B, C and E (120°, 95° and 160° are all between 90° and 180°)

10. 3

11. Right angle

12. B — pentagon

13. 2

14. Acute

15. 4

Standard

16. Obtuse-angled triangle

17. C — equilateral

18. Right-angled triangle

19. 4

20. 180°

21. A — exactly two sides equal

22. 360°

23. A and B (a square and a rectangle always have 4 right angles; a rhombus and parallelogram do not need to)

24. 5

25. 180°

26. A — semicircle

27. 50°

28. 9

29. A — rhombus

30. 4

Standard / Advanced

31. 190°, which is a reflex angle (a right angle is 90°, plus 100° = 190°)

32. B — 180 − 125 = 55°

33. 60° (180 − 60 − 60)

34. A, C and E (it could be a rhombus, and is a quadrilateral with 4 sides; a rhombus IS a type of parallelogram so D is false, and B is false since it has no right angles)

35. 80°, which is acute

36. 115°

37. 140°

© PassFrame Tuition — for registered student use

38. C — 360 − 95 − 85 − 90 = 90°

39. 65° and 50° (two base angles of 65° each, and the third angle = 180 − 65 − 65 = 50°)

40. A, C and D (vertically opposite angles are always equal; B and E show adjacent angles that add to 180°, not equal pairs)

41. 90°

42. Let the smaller angle be x: x + (x+40) = 180, so 2x = 140, x = 70. The angles are 70° and 110°

43. B — 180 − 90 − 35 = 55°

44. 720 ÷ 6 = 120°

45. 180 − 50 − 60 = 70°
