PassFrame tuition

Word Codes

Year 5 Accelerated — Homework ⏱ 45 min

Worked example — read this through before you start

Worked example: If FISH is coded as GJTI (each letter shifts forward by 1), what does BIRD code as?
Method & answer: Shift every letter of BIRD forward by 1: B→C, I→J, R→S, D→E. Answer: CJSE.

Easy / Standard — *work through together, answer 5 in the lesson* ⏱ *15 min (1 min per question)*

1. If the code for HEN is IFO (each letter shifts forward by 1), what is the code for HAT?

2. If the code for MOP is NPQ (each letter shifts forward by 1), what is the code for MUD?

3. If the code for BEG is ADF (each letter shifts back by 1), what is the code for CAB?

4. If the code for FIT is EHS (each letter shifts back by 1), what is the code for GOT?

5. If the code for ANT is CPV (each letter shifts forward by 2), what is the code for ARM?

6. If the code for EGG is GII (each letter shifts forward by 2), what is the code for ELF?

7. In a code, every letter shifts forward by 1. The coded word is MPH. What is the original word?

8. If the code for KID is LJE (each letter shifts forward by 1), what is the code for KIT?

9. If the code for DEN is CDM (each letter shifts back by 1), what is the code for DOT?

10. If the code for BAR is DCT (each letter shifts forward by 2), what is the code for BOY?

11. In a code, every letter shifts forward by 1. The coded word is SBU. What is the original word?

12. If the code for PIT is OHS (each letter shifts back by 1), what is the code for PEA?

13. If the code for SIT is UKV (each letter shifts forward by 2), what is the code for SKY?

14. If the code for TOE is UPF (each letter shifts forward by 1), what is the code for TOY?

15. In a code, every letter shifts back by 1. The coded word is VDA. What is the original word?

Standard — *work through together, answer 5 in the lesson* ⏱ *15 min (1 min per question)*

1. If the code for YELLOW is BHOORZ (each letter shifts forward by 3, wrapping round the alphabet where needed), what is the code for MEADOW?

2. If the code for DRAGON is AOXDLK (each letter shifts back by 3, wrapping round the alphabet where needed), what is the code for CANYON?

3. If the code for WINTER is ZLQWHU (each letter shifts forward by 3, wrapping round the alphabet where needed), what is the code for

6. A code reverses the order of the letters in a word. Using this code, VALLEY becomes YELLAV. What does the same code turn PALACE into?

7. If the code for VOYAGE is YRBDJH (each letter shifts forward by 3, wrapping round the alphabet where needed), what is the code for ISLAND?

8. In a code, every letter shifts back by 3, wrapping round the alphabet where needed. The coded word is XKZELO. What is the original word?

11. Using a reverse-alphabet code (A ↔ Z, B ↔ Y, C ↔ X…), the word RIVER becomes IREVI. What does OCEAN become under the same code?

12. If the code for BLANKET is XHWJGAP (each letter shifts back by 4, wrapping round the alphabet where needed), what is the code for CUSHION?

13. In a code, every letter shifts forward by 3, wrapping round the alphabet where needed. The coded word is SODQHW. What is the

SPRING?

4. In a code, every letter shifts forward by 4, wrapping round the alphabet where needed. The coded word is HIWIVX. What is the original word?

5. If the code for JUNGLE is LWPING (each letter shifts forward by 2, wrapping round the alphabet where needed), what is the code for TEMPLE?

9. A code shifts consonants forward by 2 and vowels backward by 2, wrapping where needed. Using this rule, METEOR becomes OCVCMT. What does the same rule turn BEACON into?

10. If the code for HARVEST is LEVZIWX (each letter shifts forward by 4, wrapping round the alphabet where needed), what is the code for COMPASS?

original word?

14. If the code for SUNSET is XZSXJY (each letter shifts forward by 5, wrapping round the alphabet where needed), what is the code for PARCEL?

15. If the code for WHISPER is UFGQNCP (each letter shifts back by 2, wrapping round the alphabet where needed), what is the code for THUNDER?

Standard / Advanced — *work through together, answer 5 in the lesson* ⏱ *15 min (1 min per question)*

1. If BAT codes as DCV, what codes for CAT?

2. A code reverses HEN to get NEH. What does the same code turn TOP into?

3. If CAT is coded as BZS, what codes for FOX?

4. In a code, DOG becomes EQJ (1st letter +1, 2nd +2, 3rd +3). What does CAT become?

5. A code shifts every letter back by 5, wrapping round the alphabet. Using this, what does BAT become?

6. A code shifts every letter forward by the number of letters in the word. Since DOG has 3 letters, each letter shifts by 3, so DOG becomes GRJ. Using the same rule, what does CLOCK become? (CLOCK has 5 letters.)

7. A code reverses a word's letters, then shifts each one forward by 2. Applying this to CAT: reverse to TAC, then shift +2 to get VCE. Using the same rule, what does SHARK become?

8. In a code, letters in odd positions (1st, 3rd, 5th…) shift forward by 2, and letters in even positions (2nd, 4th…) shift backward by 2. Using this rule, GARDEN becomes IYTBGL. Work out what the same rule turns PLANET into.

9. A code shifts consonants forward by 2 and vowels backward by 2, wrapping where needed. Using this rule, FISH becomes HGUJ. What does the same rule turn CASTLE into?

10. We know PLUM becomes SOXP under a fixed forward-shift code. What is the code for GRAPE under the same shift?

11. A code swaps the 1st and last letters of a word, and shifts the middle letters forward by 1. Applying this to CHAT, we get TIBC. What does the same rule turn SPORT into?

12. A code doubles every letter and then removes the vowels. Applying this to BIRD: double to BBIIRRDD, then remove vowels to get BBRRDD. What does the same rule turn HORSE become?

13. A code first swaps each letter using the reverse-alphabet code (A ↔ Z, B ↔ Y, C ↔ X…) and then shifts the result forward by 1. Applying this to CAT, we get YAH. What does the same two-step rule turn FISH become?

14. A code shifts every letter forward by 1, then reverses the whole word. Applying this to LEMON: shift to get MFNPO, then reverse to get OPNFM. Using the same rule, what does TIGER become?

15. A code reverses the order of the letters in a word, then swaps each letter using the reverse-alphabet code (A ↔ Z, B ↔ Y, C ↔ X…). Applying this to DOG, we get TLW.

What does the same two-step rule turn FISH become?
