Rounding

Year 4 · Supplementary Worksheet — extra practice & worked breakdowns

Worked Examples

Example 1 — Rounding to the nearest 10: Round 86 to the nearest 10.

Answer: 86 sits between 80 and 90. Compare the distance: 86 is 6 away from 80 but only 4 away from 90, so it is closer to 90. Answer: 90.

Example 2 — Rounding to the nearest 100, exact halfway: Round 3,450 to the nearest 100.

Answer: 3,450 is exactly halfway between 3,400 and 3,500. When a number is exactly halfway, PassFrame's rule is to round up. Answer: 3,500.

Example 3 — Rounding to the nearest 1,000: Round 62,700 to the nearest 1,000.

Answer: Find the two multiples of 1,000 either side: 62,000 and 63,000. Look at the hundreds digit (7): since it is 5 or more, round up. Answer: 63,000.

Example 4 — Working backwards from a rounded answer: A number rounds to 5,200 at the nearest 100. What are the smallest and largest numbers it could have been?

Answer: Rounding to the nearest 100 means the number is within 50 of 5,200. The smallest possible is 5,200 − 50 = 5,150. The largest possible is 5,200 + 49 = 5,249 (5,250 would round to 5,300). Answer: 5,150 to 5,249.

Example 5 — Comparing two roundings: Round 2,748 to the nearest 10, and also to the nearest 100. Which rounded answer is larger?

Answer: To the nearest 10: look at the units digit (8), round up → 2,750. To the nearest 100: look at the tens digit (4), round down → 2,700. 2,750 is larger than 2,700.

Foundation

(15 questions)

1. Round 85 to the nearest 10.
2. Round 35 to the nearest 10.
3. Round 56 to the nearest 10.
4. Round 17 to the nearest 10.

5. Round 95 to the nearest 10.
6. Round 75 to the nearest 10.
7. Round 38 to the nearest 10.
8. Round 88 to the nearest 10.
9. Round 39 to the nearest 10.
10. Round 47 to the nearest 10.
11. Round 73 to the nearest 10.
12. Round 53 to the nearest 10.
13. Round 67 to the nearest 10.
14. Round 43 to the nearest 10.
15. Round 31 to the nearest 10.

Standard

(20 questions)

1. Round 1,560 to the nearest 100.
2. Round 59,404 to the nearest 1,000.
3. A cinema reports 7,506 tickets sold in a week. Priya rounds this to the nearest 100 for a poster. What number should Priya write?
4. Round both 8,908 and 6,109 to the nearest 100. Which rounded value is larger?
5. Round 3,244 to the nearest 100.
6. Round 62,874 to the nearest 1,000.
7. A cinema reports 7,641 tickets sold in a week. Nadia rounds this to the nearest 100 for a poster. What number should Nadia write?
8. Round both 5,446 and 4,017 to the nearest 100. Which rounded value is larger?
9. Round 6,722 to the nearest 100.
10. Round 56,401 to the nearest 1,000.
11. A cinema reports 2,906 tickets sold in a week. Amara rounds this to the nearest 100 for a poster. What number should Amara write?
12. Round both 1,135 and 7,152 to the nearest 100. Which rounded value is larger?
13. Round 7,768 to the nearest 100.
14. Round 40,933 to the nearest 1,000.
15. A cinema reports 2,934 tickets sold in a week. Sofia rounds this to the nearest 100 for a poster. What number should Sofia write?
16. Round both 1,920 and 5,487 to the nearest 100. Which rounded value is larger?
17. Round 4,484 to the nearest 100.

18. Round 52,776 to the nearest 1,000.

19. A cinema reports 7,608 tickets sold in a week. Grace rounds this to the nearest 100 for a poster. What number should Grace write?

20. Round both 6,319 and 3,858 to the nearest 100. Which rounded value is larger?

Hard

(5 questions)

1. A number rounds to 3,200 when rounded to the nearest 100. Give the smallest and the largest whole number it could have been.

2. Round 20,571 to the nearest 10,000.

3. A number rounds to 53,000 at the nearest 1,000 and to 53,200 at the nearest 100. What is one possible value of the number?

4. Explain why 1,110 could round to two different answers depending on the rounding rule used, when rounding to the nearest 100.

5. Two numbers add up to exactly 9,000. One of them rounds to 6,000 at the nearest 100. What is the smallest possible value of the other number (before rounding)?
