04. Multiplication & Division

Year 4 · **Supplementary Worksheet** — extra practice & worked breakdowns

Worked Examples

Example 1 — Recalling a times-table fact:

Work out 7 × 8.

Answer: Recall the 7 or 8 times table: 7 × 8 = **56**.

Example 2 — Multiplying a 2-digit number, splitting into tens and units:

Work out 47 × 6.

Answer: Split 47 into 40 + 7. 40 × 6 = 240. 7 × 6 = 42. Add the parts: 240 + 42 = **282**.

Example 3 — Division with a remainder, interpreting the remainder:

A coach seats 9 people. How many coaches are needed for 68 people, and how many empty seats will there be?

Answer: 68 ÷ 9 = 7 remainder 5, so 7 coaches are not quite enough — an 8th coach is needed for the extra 5 people. 8 coaches hold 8 × 9 = 72 seats in total, so there are 72 − 68 = **4 empty seats** (8 coaches needed).

Example 4 — Multiplying and dividing by 10 and 100:

Work out 45 × 100, then divide your answer by 10.

Answer: 45 × 100 = 4,500 (add two zeros). Then 4,500 ÷ 10 = **450** (remove one zero).

Example 5 — Multi-step word problem:

A box holds 8 chocolates. Tom has 6 full boxes and 5 extra loose chocolates. How many chocolates does he have in total?

Answer: First multiply: 6 × 8 = 48 chocolates in the full boxes. Then add the extras: 48 + 5 = **53 chocolates**.
