Year 4 · **Supplementary Worksheet** — extra practice & worked breakdowns

Worked Examples

Example 1 — Converting metres to centimetres:

Convert 4m to cm.

Answer: 1m = 100cm, so 4 × 100 = **400cm**.

Example 2 — Sharing a length equally:

A ribbon is 1m 80cm long. It is cut into 3 equal pieces. How long is each piece, in cm?

Answer: 1m 80cm = 180cm. 180 ÷ 3 = **60cm**.

Example 3 — Writing a mass as a fraction of a kilogram:

A recipe needs 750g of flour. Write this as a fraction of a kilogram.

Answer: 750g out of 1,000g is 750/1000, which simplifies to **3/4 kg**.

Example 4 — Adding mixed units of length:

Add 2m 65cm and 1m 45cm. Give your answer in cm.

Answer: Convert both to cm first: 265cm + 145cm = **410cm** (which is 4m 10cm).

Example 5 — Multi-step capacity word problem:

A tank holds 12 litres. 4.5 litres are used, then 2 litres are poured back in. How many litres are in the tank now?

Answer: First subtract: 12 − 4.5 = 7.5 litres. Then add: 7.5 + 2 = **9.5 litres**.
